ISSN 0022-0248

JOURNAL OF CRYSTAL GROWTH

VOLUME 200, pp. 635–720
(1999)

MASTER INDEX

Volumes 191–200

EDITORS:

G.B. STRINGFELLOW (Principal Editor),
University of Utah

M. SCHIEBER (Founding Editor),
Hebrew University

R.S. FEIGELSON, Stanford University

D.T.J. HURLE, University of Bristol

R. KERN, Université Aix–Marseille

T. NISHINAGA, University of Tokyo

CO-FOUNDERS: N. CABRERA, B. CHALMERS, F.C. FRANK
FORMER ADVISOR: R.A. LAUDISE†

K. SATO (*Biocrystallization and Organic Crystals*)
L.F. SCHNEEMEYER (*Superconductivity, Oxides, Novel Materials, Priority Communications*)
D.W. SHAW (*Semiconductors, Epitaxy, Devices*)
M. UWAHA (*Growth Kinetics*)
A.F. WITT (*Semiconductor Crystals*)
A. ZANGWILL (*Theory (Epitaxy)*)

Scope of the journal

Experimental and theoretical contributions are invited in the following fields: Theory of nucleation and growth, molecular kinetics and transport phenomena, crystallization in viscous media such as polymers and glasses. Crystal growth of metals, minerals, semiconductors, magnetics, inorganic, organic and biological substances in bulk or as thin films. Apparatus, instrumentation and techniques for crystal growth, and purification methods. Characterization of single crystals by physical and chemical methods.

Abstracted/indexed in:

Aluminium Industry Abstracts; Chemical Abstracts; Current Contents: Physical, Chemical and Earth Sciences; EI Compendex Plus; Engineered Materials Abstracts; Engineering Index; INSPEC; Metals Abstracts.

Subscription information 1999

Volumes 195–207 of Journal of Crystal Growth (ISSN 0022-0248) are scheduled for publication. (Frequency: semimonthly.) Prices are available from the publishers upon request. Subscriptions are accepted on a prepaid basis only. Issues are sent by SAL (Surface Air Lifted) mail wherever this service is available. Airmail rates are available upon request.

Orders, claims, and product enquiries

Please contact the Customer Support Department at the Regional Sales Office nearest to you:

New York: Elsevier Science, P.O. Box 945, New York, NY 10159-0945, USA; tel.: +1 212 633 3730 [toll free number for North American customers: 1-888-4ES-INFO (437-4636)]; fax: +1 212 633 3680; e-mail: usinfo-f@elsevier.com.

Amsterdam: Elsevier Science, P.O. Box 211, 1000 AE Amsterdam, The Netherlands; tel.: +31 20 485 3757; fax: +31 20 485 3432; e-mail: nlinfo-f@elsevier.nl.

Tokyo: Elsevier Science, 9-15 Higashi-Azabu 1-chome, Minato-ku, Tokyo 106-0044, Japan; tel.: +81 3 5561 5033; fax: +81 3 5561 5047; e-mail: info@elsevier.co.jp.

Singapore: Elsevier Science, No. 1 Temasek Avenue, #17-1 Millenia Tower, Singapore 039192; tel.: +65 434 3727; fax: +65 337 2230; e-mail: asiainfo@elsevier.com.sg.

Rio de Janeiro: Elsevier Science, Rua Sete de Setembro 111/16 Andar, 20050-002 Centro, Rio de Janeiro – RJ, Brazil; tel.: +55 21 509 5340; fax: +55 21 507 1991; e-mail: elsevier@campus.com.br. [Note: (Latin America): for orders, claims and help desk information, please contact the Regional Sales Office in New York as listed above.]

Claims for issues not received should be made within six months of our publication (mailing) date.

Advertising information

Advertising orders and enquiries can be sent to:

USA, Canada and South America: Mr. Tino de Carlo, The Advertising Department, Elsevier Science Inc., 655 Avenue of the Americas, New York, NY 10010-5107, USA; tel.: +1 212 633 3815; fax: +1 212 633 3820; e-mail: t.decarlo@elsevier.com.

Japan: The Advertising Department, Elsevier Science K.K., 9-15 Higashi-Azabu 1-chome, Minato-ku, Tokyo 106-0044, Japan; tel.: +81 3 5561 5033; fax: +81 3 5561 5047.

Europe and ROW: Rachel Gresle-Farthing, The Advertising Department, Elsevier Science Ltd., The Boulevard, Langford Lane, Kidlington, Oxford OX5 1GB, UK; tel.: +44 1865 843565; fax: +44 1865 843976; e-mail: r.gresle-farthing@elsevier.co.uk.

US mailing notice – *Journal of Crystal Growth* (ISSN 0022-0248) is published semimonthly by Elsevier Science B.V., Molenwerf 1, P.O. Box 211, 1000 AE Amsterdam, The Netherlands. Annual subscription price in the USA is US$ 7545 (valid in North, Central and South America only), including air speed delivery. Periodicals postage paid at Jamaica, NY 11431, USA.

US postmasters: Send address changes to Journal of Crystal Growth, Publications Expediting, Inc., 200 Meacham Avenue, Elmont, NY 11003, USA. Airfreight and mailing in the USA by Publications Expediting.

♾ The paper used in this publication meets the requirements of ANSI/NISO Z39.48-1992 (Permanence of Paper)

This journal and the individual contributions contained in it are protected under copyright by Elsevier Science B.V., and the following terms and conditions apply to their use:

Photocopying
Single photocopies of single articles may be made for personal use as allowed by national copyright laws. Permission of the Publisher and payment of a fee is required for all other photocopying, including multiple or systematic copying, copying for advertising or promotional purposes, resale, and all forms of document delivery. Special rates are available for educational institutions that wish to make photocopies for non-profit educational classroom use.
Permissions may be sought directly from Elsevier Science Rights & Permissions Department, P.O. Box 800, Oxford OX5 1DX, UK; tel.: +44 1865 843830, fax: +44 1865 853333, e-mail: permissions@elsevier.co.uk. You may also contact Rights & Permissions directly through Elsevier's home page (http://www.elsevier.nl), selecting first 'Customer Support', then 'General Information', then 'Permissions Query Form'.
In the USA, users may clear permissions and make payments through the Copyright Clearing Center, Inc., 222 Rosewood Drive, Danvers, MA 01923, USA; tel.: +1 978 7508400, fax: +1 978 7504744, and in the UK through the Copyright Licensing Agency Rapid Clearance Service (CLARCS), 90 Tottenham Court Road, London W1P 0LP, UK; tel.: +44 171 631 5555, fax: +44 171 631 5500. Other countries may have a local reprographic rights agency for payments.

Derivative works
Subscribers may reproduce tables of contents or prepare lists of articles including abstracts for internal circulation within their institutions. Permission of the Publisher is required for resale or distribution outside the institution.
Permission of the Publisher is required for all other derivative works, including compilations and translations.

Electronic storage or usage
Permission of the Publisher is required to store or use electronically any material contained in this journal, including any article or part of an article.
Except as outlined above, no part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without prior written permission of the Publisher.
Address permissions requests to: Elsevier Science Rights & Permissions Department, at the mail, fax and e-mail addresses noted above.

Notice
No responsibility is assumed by the Publisher for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein. Because of rapid advances in the medical sciences, in particular, independent verification of diagnoses and drug dosages should be made. Although all advertising material is expected to conform to ethical (medical) standards, inclusion in this publication does not constitute a guarantee or endorsement of the quality of such product or of the claims made of it by its manufacturer.

JOURNAL OF CRYSTAL GROWTH

Subject index to volumes 191–200

Apparatus
- for crucibleless method **198/199** (1999) 501
- for crystallization of ammonium perchlorate **194** (1998) 220
- for crystallization of lysozyme **200** (1999) 575
- for determining substrate orientation **192** (1998) 456
- for directional solidification **191** (1998) 252; **193** (1998) 701
- for environmental near-edge X-ray absorption fine structure spectroscopy **198/199** (1999) 275
- for epitaxy growth **200** (1999) 32, 39
- for forced flow growth **196** (1999) 261
- for forced stirring Czochralski of melt growth **191** (1998) 774
- for gallium nitride synthesis **196** (1999) 47
- for gravity influence on protein crystallization **196** (1999) 587
- for high pressure optical vessel **191** (1998) 827
- for in situ observation of crystallization **193** (1998) 61
- for in situ time resolved reflectance measurement **195** (1998) 205
- for industrial crystallizers **198/199** (1999) 729
- for laser manipulating of seeding **196** (1999) 685
- for levitated containerless growth of protein droplets **194** (1998) 384
- for measuring temperature field **198/199** (1999) 56
- for melt growth under microgravity **200** (1999) 1
- for microbatch crystallization **196** (1999) 450, 665
- for microgravity crystal growth **196** (1999) 572
- for multi-zone Mellen furnace **191** (1998) 904
- for physical vapor transport rate **193** (1998) 80
- for polythermal microbatch growth **196** (1999) 447
- for protein diagnostics **196** (1999) 638
- for protein growth **191** (1998) 537; **192** (1998) 282; **196** (1999) 602, 610
- for pyrochlore anti-ferromagnet growth of $Tb_2Ti_2O_7$ **191** (1998) 740
- for solubility measurements under high pressure **196** (1999) 204
- for supercritical precipitation **198/199** (1999) 760
- for III–V compounds **198/199** (1999) 1049
- for vertical Bridgman with submerged heater **191** (1998) 904
- for zone melting **192** (1998) 410

Biological aspects
- of antibody recognition **193** (1998) 656

Cellular growth
- of alloys **200** (1999) 583
- of aluminum zinc alloys **197** (1999) 393
- of diamond **198/199** (1999) 963
- of lead tin alloys **193** (1998) 692
- of transparent alloys **193** (1998) 701

Computer simulation
- of alpha-glycine **191** (1998) 791
- of atomic scale processes **198/199** (1999) 1
- of binary solutions **200** (1999) 592
- of buoyant melt flow **197** (1999) 341
- of chemical vapor deposition reactor **200** (1999) 527
- of convection **191** (1998) 206
- of crystal growth **194** (1998) 178
- of crystal lattices **196** (1999) 276
- of defect equilibrium **197** (1999) 493
- of dislocation density **196** (1999) 62
- of dissolution modes **198/199** (1999) 83
- of dissolution of sucrose **198/199** (1999) 749
- of ductile solidification **191** (1998) 261
- of effective mass theory growth
- – of chemical vapor deposition on diamond **194** (1998) 353
- – of gallium selenide **194** (1998) 331
- – of zinc selenide **194** (1998) 331
- of gamma-aminobutyric acid **191** (1998) 803
- of heat transfer **191** (1998) 413; **194** (1998) 321; **197** (1999) 435; **198/199** (1999) 101, 349, 710
- of impurity effect **198/199** (1999) 71
- of Kossel (100) surface **198/199** (1999) 22
- of lithium niobate melt flow **200** (1999) 204
- of liquid–liquid diffusion **196** (1999) 442
- of low supersaturation nucleation **193** (1998) 426
- of melt growth **193** (1998) 592
- of micro-pulling down process **193** (1998) 552
- of molecular dynamics **198/199** (1999) 114
- of molecular orbitals in gas phase **191** (1998) 405
- of nonplanar epitaxy **195** (1998) 596
- of Ostwald ripening **197** (1999) 973
- of oxygen doping in silicon **193** (1998) 541
- of phase field model **193** (1998) 712
- of plastic stress relaxation **198/199** (1999) 232
- of solid–liquid interface **194** (1998) 149
- of solute transport **194** (1998) 133

- scintillators **197** (1999) 471, 475; **198/199** (1999) 292, 492
- solar cells **196** (1999) 13; **197** (1999) 733, 833
- superlattices **195** (1998) 117
- thermophotovoltaic **195** (1998) 346, 363
- transistor **195** (1998) 681

Diffusional control
- of beryllium in indium gallium arsenide **194** (1998) 297
- of cadmium selenide **193** (1998) 516
- of crystal growth **192** (1998) 185, 225
- of doping **197** (1999) 537
- of gallium nitride **191** (1998) 646
- of germanium in silicon–germanium **193** (1998) 328
- of heat flow control **192** (1998) 328
- of hen egg white lysozyme **196** (1999) 623, 703
- of lithium borate **200** (1999) 172, 276
- of protein crystal growth **196** (1999) 572
- of segregation **197** (1999) 749
- of solid growth **193** (1998) 197
- of tellurium in gallium antimonide **191** (1998) 904
- of vapor growth **197** (1999) 513
- of zinc **195** (1998) 79, 112

Diodes, see Device characterization

Dissolution of
- ammonium perchlorate **194** (1998) 220
- lead titanate **197** (1999) 195
- neodymium barium cuprate **193** (1998) 61
- potassium sulphate **197** (1999) 388
- proteins under high pressure **196** (1999) 204

Doping
- of silicon and carbon in III–V compounds **195** (1998) 54
- of zinc in gallium arsenide **191** (1998) 357

Electronic materials, see Device characterization

Epitaxy, see Thin film growth

Etching
- chemical **191** (1998) 153, 275, 589, 594; **192** (1998) 1, 63, 410, 417; **193** (1998) 16, 305, 510; **194** (1998) 43, 286, 379; **195** (1998) 199, 490, 495, 624; **196** (1999) 1; **197** (1999) 449, 475,

517, 702, 1012; **198/199** (1999) 17, 430, 526, 975; **200** (1999) 96, 185, 543
- electrochemical **198/199** (1999) 815
- gas **194** (1998) 277
- of low-angle boundaries **191** (1998) 108
- photolithographic **193** (1998) 510; **195** (1998) 495
- thermal **198/199** (1999) 471

Eutectic growth
- of aluminum–copper **194** (1998) 398
- of Al–$CuAl_2$ **191** (1998) 558
- of aluminum–silicon **191** (1998) 252
- of binary systems **194** (1998) 263
- of iron–aluminum–niobium **198/199** (1999) 850
- of LaB_6–ZnB_2 **191** (1998) 873
- of nickel–silicon alloys **198/199** (1999) 844
- of succinonitrile–carbontetrabromide system **191** (1998) 234

Heat flow control **198/199** (1999) 147, 165; **200** (1999) 329
- of closed-spaced growth **195** (1998) 725
- of Czochralski growth of silicon **191** (1998) 413
- of interface control **197** (1999) 552
- of numerical simulation **193** (1998) 430
- of vapor growth system **193** (1998) 426

Heterojunctions, see Device characterization
Heterostructures, see Device characterization
Hydrodynamics, see Convection

Kinetics
- of aggregation **200** (1999) 265
- of defects **197** (1999) 565
- of dendritic growth **191** (1998) 298
- of diffusion **195** (1998) 112; **197** (1999) 743
- of dissolution **198/199** (1999) 27, 32, 83
- of doping **195** (1998) 740
- of etching **198/199** (1999) 430
- of growth **191** (1998) 24, 34, 44, 166, 169, 178, 185, 199, 553, 651, 697, 760, 811, 827, 834, 861; **192** (1998) 18, 33, 97, 185, 200, 225, 300, 402, 430, 439, 448; **193** (1998) 80, 90, 114, 156, 164, 182, 189, 305, 342, 374, 382, 430, 470, 510, 528, 535, 577, 610; **194** (1998) 101, 109, 178, 214, 220, 292, 336, 353, 398, 426; **195** (1998) 58, 174, 187, 228, 234, 328, 459, 596, 718, 733; **196** (1999) 1, 115, 156, 220, 261, 285, 297, 471, 503, 623, 649, 703; **197** (1999) 7, 37, 78, 84, 147, 155, 244, 271, 286, 317, 355, 497, 616, 789, 805, 874, 905, 944, 973, 992; **198/199** (1999) 1, 10, 22, 32, 56, 62, 71, 77, 176, 270, 349, 516, 687, 723, 729, 738, 744, 754, 838, 1032, 1174, 1245, 1251, 1267, 1275, 1326; **200** (1999) 19, 32, 39, 213, 236, 251, 287, 297, 368, 583, 617
- of growth element shaped method **191** (1998) 779
- of impurity effects **197** (1999) 263
- of interface control **191** (1998) 18, 143, 166, 178, 282, 347; **192** (1998) 56; **194** (1998) 138; **195** (1998) 459, 516, 596; **196** (1999) 41, 261, 524; **197** (1999) 789; **198/199** (1999) 96, 165, 885, 900, 988; **200** (1999) 13, 341
- of nucleation **191** (1998) 178, 185, 421, 525, 811; **192** (1998) 395, 448; **193** (1998) 156, 257, 426, 510, 610, 641; **194** (1998) 16, 109, 239; **195** (1998) 174, 459; **196** (1999) 1, 220, 226, 243, 388, 471, 524, 649; **197** (1999) 155, 263, 789, 927; **198/199** (1999) 27, 67, 414, 631, 723, 729, 738; **200** (1999) 236
- of particle engulfment **193** (1998) 413
- of precursor analysis **191** (1998) 1
- of sedimentation **191** (1998) 199
- of surface processes **193** (1998) 451
- of thin film formation **193** (1998) 133
- of transformation **191** (1998) 783

Lasers, see Device characterization
Lasers, crystals for **198/199** (1999) 435, 454, 466, 482, 546, 555, 564, 980
- alumina **191** (1998) 520
- gadolinium ytterbium gallium garnet **194** (1998) 203
- holmium:yttrium aluminum borate **191** (1998) 767
- metal fluorides **200** (1999) 510
- nonlinear optical crystals **191** (1998) 135
- potassium gadolinium tungstate **196** (1999) 181
- sapphire **191** (1998) 779
- silicon nanowires **197** (1999) 129, 136
- silver gallium selenide **193** (1998) 597
- ultraviolet **193** (1998) 364, 370
- yttrium calcium oxaborate **200** (1999) 335

Lysozyme **191** (1998) 199; **194** (1998) 384; **196** (1999) 193, 204, 226, 243, 261, 285, 319, 332, 403, 503, 511, 535, 546, 559, 649, 674, 691, 703; **197** (1999) 257; **198/199** (1999) 661; **200** (1999) 265, 575

Melt growth technique
- by axial gradient solidification **198/199** (1999) 860
- by Bridgman–Stockbarger method
- - of aluminum–cerium systems **197** (1999) 286
- - of aluminum–lanthanum systems **197** (1999) 286
- - of aluminum–neodymium systems **197** (1999) 286
- - of BSCCO **192** (1998) 136
- - of cadmium manganese telluride **198/199** (1999) 872
- - of cadmium selenide **197** (1999) 655
- - of cadmium telluride **197** (1999) 406, 603, 607, 659, 707, 718, 724, 729
- - of cadmium zinc manganese telluride **197** (1999) 694
- - of cadmium zinc telluride **192** (1998) 196; **197** (1999) 427, 443, 635, 707, 718, 729
- - of copper indium diselenide **197** (1999) 169
- - of copper indium gallium selenide **200** (1999) 137
- - of copper indium selenide **198/199** (1999) 321
- - of copper zinc diselenide **191** (1998) 97
- - of epsilon-caprolactam **191** (1998) 169
- - of gallium antimonide **192** (1998) 63; **194** (1998) 43, 149; **197** (1999) 1, 749; **198/199** (1999) 379
- - of gallium arsenide **198/199** (1999) 325, 374
- - of germanium silicon **192** (1998) 125
- - of indium antimonide **200** (1999) 96
- - of indium arsenide **197** (1999) 1
- - of indium arsenide/gallium antimonide **198/199** (1999) 384
- - of lanthanum lutetium oxide **198/199** (1999) 497
- - of lead barium niobate **193** (1998) 347, 355
- - of lead potassium niobate **198/199** (1999) 542

- – of lead tin manganese telluride **200** (1999) 483
- – of lutetium ortho-aluminate **198/199** (1999) 492
- – of manganese bismuth **191** (1998) 243
- – of mercury manganese telluride **197** (1999) 688; **198/199** (1999) 297
- – of silver gallium selenide **193** (1998) 597
- – of succinonitrile **193** (1998) 701
- – of 2,3-dimethyl naphthalene **198/199** (1999) 665
- – of zinc mercury manganese telluride **197** (1999) 698
- – of zinc selenide **193** (1998) 39; **197** (1999) 466, 655; **198/199** (1999) 292
- – theory
- – – of growth under strong, low frequency rotating magnetic field **192** (1998) 318
- – – of heat flow **193** (1998) 430, 592
- – – of solidification **194** (1998) 247
- by cold traveling heater method
- – of zinc telluride **191** (1998) 685
- by crucibleless method **198/199** (1999) 501
- by Czochralski method
- – of alkali halides **200** (1999) 476
- – of alpha-barium borate **191** (1998) 517
- – of aluminum tungstate **200** (1999) 169
- – of aluminum tungstate oxide **197** (1999) 879
- – of barium borate **198/199** (1999) 161
- – of barium yttrium europium chloride **200** (1999) 515
- – of benzil **193** (1998) 252
- – of bismuth germanate **197** (1999) 865
- – of bismuth silicate **200** (1999) 329
- – of bismuth silicon oxide **198/199** (1999) 154
- – of bismuth telluride **198/199** (1999) 482
- – of bismuth tellurite **197** (1999) 210
- – of cadmium tungstate **198/199** (1999) 877; **200** (1999) 191
- – of calcium gadolinium alumate **196** (1999) 122
- – of cesium iodide **198/199** (1999) 865
- – of europium lithium niobate **200** (1999) 185
- – of gadolinium lanthanum vanadate **193** (1998) 370
- – of gadolinium ytterbium gallium garnet **194** (1998) 203
- – of gallium arsenide **191** (1998) 303; **198/199** (1999) 125, 325, 336, 343, 349, 355, 361
- – of germanium **193** (1998) 720
- – of germanium silicon **198/199** (1999) 404
- – of indium antimonide **193** (1998) 443
- – of indium phosphide **192** (1998) 1; **198/199** (1999) 129
- – of lanthanum galate **197** (1999) 204
- – of lanthanum strontium aluminum tantalate **194** (1998) 209
- – of large alkali halide **198/199** (1999) 856
- – of lead tungstate **191** (1998) 130; **198/199** (1999) 881
- – of lithium calcium aluminum fluoride **197** (1999) 896
- – of lithium niobate **191** (1998) 589; **198/199** (1999) 521
- – of lithium tantalate **197** (1999) 889
- – of lithium tetraborate **193** (1998) 364
- – of neodymium yttrium vanadate **200** (1999) 199
- – of potassium zinc chloride **200** (1999) 148
- – of rare earth gallium silicon dioxide **191** (1998) 746
- – of rubidium zinc chloride **200** (1999) 148
- – of scandium tungstate **200** (1999) 169
- – of silicon **191** (1998) 413; **192** (1998) 117; **193** (1998) 402, 541, 720; **194** (1998) 70, 76; **196** (1999) 111; **198/199** (1999) 120, 135, 141, 390, 409
- – of silicon germanium **191** (1998) 393, 399
- – of $Tb(Fe,Ti)_{12}$ **192** (1998) 417
- – of ytterbium lithium niobate **200** (1999) 185
- – of yttrium aluminum oxide **198/199** (1999) 435
- – of yttrium calcium oxyborate **197** (1999) 228
- – of yttrium orthosilicate **197** (1999) 901
- – theory of convection **197** (1999) 297, 307
- by edge-defined film-fed method
- – of alumina **191** (1998) 520
- – of potassium lithium niobate **194** (1998) 379
- by emulsification **197** (1999) 263
- by floating zone method **200** (1999) 1, 179
- – of barium aluminate **198/199** (1999) 869
- – of calcium aluminate **198/199** (1999) 869
- – of calcium boron **192** (1998) 346
- – of calcium lanthanum cuprate **197** (1999) 825
- – of chromium borate **200** (1999) 472
- – of decagonal aluminum–nickel–cobalt **191** (1998) 545
- – of fibrous yttrium iron garnet **193** (1998) 446
- – of gallium antimonide **191** (1998) 365
- – of gallium arsenide **198/199** (1999) 170
- – of lanthanum manganite **198/199** (1999) 511
- – of niobium dibromide **194** (1998) 430
- – of palladium **192** (1998) 410
- – of perovskite manganites **191** (1998) 294
- – of silicon **194** (1998) 76, 321; **198/199** (1999) 107
- – of strontium aluminate **198/199** (1999) 869

– of zinc selenide **193** (1998) 528

Journal of Crystal Growth

Instructions to Authors (short version)

Submission of papers
Manuscripts (one original + two copies) should be sent to a member of the Editorial Board or preferably to an appropriate subject Associate Editor. Priority communications should be sent to L.F. Schneemeyer. News or announcements should be submitted through the Principal Editor; a duplicate should be sent directly to Elsevier Science B.V., address given below.
Original material. Submission of a manuscript implies it is not being simultaneously considered for publication elsewhere and that the authors have obtained the necessary authority for publication.

Types of contributions
Original research papers and Priority communications are welcome. They should contain an Abstract (of up to 200 words) and a Conclusions section, which particularly in the case of theoretical papers translates the results into terms readily accessible to most readers.
As a guideline: *experimental papers* should not be longer than 16 double-spaced typed pages, and 8 figures + tables; for *theoretical papers* a maximum of 20 pages and 10 figures + tables is suggested.
Priority communications should not be longer than 5 double-spaced typed pages, and 3 figures + tables. They will be given priority in both the refereeing and production processes. The faster production schedule may preclude sending proofs of Priority communications to authors.

Manuscript preparation
All manuscripts should be written in good English. The paper copies of the text should be prepared with double line spacing and wide margins, on numbered sheets.
Structure. Please adhere to the following order of presentation: Article title, Author(s), Affiliation(s), Abstract, PACS codes and keywords, Main text, Acknowledgements, Appendices, References, Figure captions, Tables.
Corresponding author. The name, complete postal address, telephone and fax numbers and the e-mail address of the corresponding author should be given on the first page of the manuscript.
Classification codes/keywords. Please supply one to four classification codes (PACS and/or MSC) and up to six keywords of your own choice that describe the content of your article in more detail.
References. References to other work should be consecutively numbered in the text using square brackets and listed by number in the Reference list. Please refer to the more detailed instructions for examples.

Illustrations
Illustrations should also be submitted in triplicate: one master set and two sets of copies. The *line drawings* in the master set should be original laser printer or plotter output or drawn in black india ink, with careful lettering, large enough (3–5 mm) to remain legible after reduction for printing. The *photographs* should be originals, with somewhat more contrast than is required in the printed version. They should be unmounted unless part of a composite figure. Any scale markers should be inserted on the photograph itself, not drawn below it.
Colour plates. Figures may be published in colour, if this is judged essential by the Editor. The Publisher and the author will each bear part of the extra costs involved. Further information is available from the Publisher.

After acceptance
Important. When page proofs of the accepted manuscripts are made and sent out to authors, this is in order to check that no undetected errors have arisen in the typesetting (or file conversion) process. At the proof stage only printer's errors may be corrected. No changes in, or additions to, the edited manuscript will be accepted.
Notification. The authors will receive the final answer of acceptance or rejection from the Editorial Board or Associate Editor and will be invited to supply an electronic version of the accepted text, if this is not already available.
Copyright transfer. In the course of the production process you will be asked to transfer the copyright of the article to the Publisher. This transfer will ensure the widest possible dissemination of information.

Electronic manuscripts
The Publisher welcomes the receipt of an electronic version of your accepted manuscript. If there is not already a copy of this (on diskette) with the journal editor at the time the manuscript is being refereed, you will be asked to send a file with the text of the accepted manuscript directly to the Publisher by e-mail or on diskette (allowed formats 3.5″ or 5.25″ MS-DOS, or 3.5″ Macintosh) to the address given below. (When e-mailing a non-ASCII word-processor file, you should encode it, e.g. with UUENCODE or BinHex, so as to retain all formatting codes.) The name and version of the word-processing program and the type of operating system should always be indicated. Please note that no deviations from the version accepted by the Editor of the journal are permissible without the prior and explicit approval by the Editor. Such changes should be clearly indicated on an accompanying printout of the file.

Author benefits
No page charges. Publishing in Journal of Crystal Growth is free.
Free offprints. The corresponding author will receive 25 offprints free of charge. An offprint order form will be supplied by the Publisher for ordering any additional paid offprints.
Discount. Contributors to Elsevier Science journals are entitled to a 30% discount on all Elsevier Science books.
